

Flange End Butterfly Valve

Specification

Material	Body	Ductile Iron
	Seal	EPDM
	Stem	#45 Steel
Working pressure	16 bar	
End Connections	Flange × Flange	
Flanges	ANSI150LB JIS 10K BS 5404	
Size	DN100	

Butterfly valve, also called flap valve, is a kind of regulating valve with simple structure. The butterfly valve that can be used for switching control of low-pressure pipeline medium refers to the closing part (disc or butterfly plate) as a disc, which rotates around the valve shaft to achieve opening and closing.

Maintenance

During the use of the butterfly valve, they should be opened and closed regularly to check their corrosion and normal operation, ensure their normal function.
